EXECUTIVE PROFILE

IT leader with more than 12 years of experience at General Motors, spanning enterprise AI adoption, network infrastructure, data center operations, and critical plant-floor systems. Founder and chair of GM Mexico's AI Adoption Council, turning employee-generated ideas into implemented initiatives with measurable savings. Owns the IT budget, infrastructure, and security posture strategies of manufacturing sites. Recognized for building high-performing, inclusive teams and translating emerging technologies into measurable business outcomes across multicultural, global environments.

SIGNATURE IMPACT

85%

Reduction in targeted work time

200+

ITIL changes, zero impact

70+

AI assets already proving value

12+

Years in enterprise IT

250+

Specialists trained worldwide

300+

Network devices operated

CORE COMPETENCIES

AI & Automation: Microsoft Copilot, GitHub Copilot, Glean (agents), Power Automate, Databricks, Cursor, AI governance and adoption frameworks

Infrastructure & Cloud: Cisco LAN/WLAN/WAN, Red Hat OpenShift, VMware, datacenter operations, plant floor systems

Security & Governance: Endpoint and network security, segmentation, threat detection, vulnerability management, compliance

Data & BI: Power BI, ServiceNow, Microsoft Power Platform, database management

Frameworks & Leadership: ITIL, change management, project delivery, IT budgeting, vendor management

PROFESSIONAL EXPERIENCE

Senior Site Support Analyst

October 2021 – Present

General Motors · San Luis Potosí, México

- Founded and lead GM Mexico's AI Adoption Council, a cross-functional team that scaled a structured AI adoption model across the IT organization at four sites, turning employee-generated ideas into pilots and implemented initiatives.
- Built production AI assets, including Glean agents, Microsoft Copilot and GitHub Copilot workflows, and Power Platform automations, driving annual savings, returning days of work time a year, and cutting targeted work time by up to 85%.
- Established the AI operating model end to end: governance standards, training curriculum, communication strategy, and an AI Innovation Hub that sustains a continuous pipeline of employee-generated use cases.
- Chair the Global Training & Development Steering Team, delivering standardized network training to 250+ specialists worldwide and improving operational readiness and knowledge consistency across regions.
- Own a multi-million IT budget, delivering strong OpEx savings through lifecycle management, vendor coordination, and asset tracking automation aligned to corporate policy.
- Directed datacenter and plant floor modernization, including full migration from VMware to Red Hat OpenShift, improving scalability, automation, and containerization while avoiding business disruption.
- Implemented enterprise network and endpoint security initiatives spanning access control, threat detection, segmentation, and vulnerability management, significantly reducing organizational risk.
- Designed global ServiceNow, Power BI, and Databricks dashboards giving IT leadership worldwide a single view of KPIs and enabling data-driven decision-making.
- Executed hundreds of ITIL-compliant change controls with zero production impact through rigorous validation, approval, and implementation practices.
- Launched an accessibility and inclusion program to integrate a deaf engineer into the IT team through tailored communication tools, training, and support, establishing a repeatable model for inclusive hiring.

LAN Operations Specialist

August 2017 – October 2021

General Motors · Ramos Arizpe, Coahuila

- Maintained and optimized LAN, WLAN, and WAN infrastructure supporting 300+ network devices, sustaining high availability and performance across critical manufacturing systems.
- Led end-to-end network deployments for major plant launches, delivering connectivity on schedule to support manufacturing readiness.
- Designed and continuously evolved a global IT metrics dashboard adopted worldwide, giving regional and global leadership shared operational visibility.
- Planned and executed network infrastructure for remodeling projects with zero disruption to business operations, applying modern security strategies to protect sensitive data.

Operations Specialist

August 2015 – August 2017

General Motors · Toluca, Estado de México

- Sustained availability and performance of critical plant floor applications through structured change management, minimizing downtime across continuous manufacturing operations.
- Resolved end-user incidents and drove effective adoption of IT systems and applications across the site.

Applications Specialist

February 2014 – August 2015

General Motors · San Luis Potosí, México

- Maintained availability and performance of critical plant floor applications supporting continuous manufacturing operations.

Finance Systems Administrator

August 2013 – February 2014

General Motors · San Luis Potosí, México

- Ensured functionality, availability, and reliability of local finance systems supporting accurate and uninterrupted business operations.

EDUCATION

Master's in Business Administration (Finance)

Universidad Tecmilenio

Bachelor's in Information Technology Engineering

Universidad Politécnica de San Luis Potosí
